

# NOTES: CHAPTER 7

## Basic Angle Properties

<p><b>Angles at a point:</b> The sum is <math>360^\circ</math>.</p>	<p><b>Angles at a point on a straight line:</b> The sum is <math>180^\circ</math></p>																																
 $a + b + c = 360^\circ$	 $A + B + C = 180^\circ$																																
<p><b>Angles at a point on intersecting straight lines: Opposite/Vertical angles are =</b></p>	<p><b>Angles formed within parallel lines: Alternate and Corresponding Angles are =</b></p>																																
 <p><math>m = n</math> <math>a = b</math></p>	<p>Alternate angles Pairs shown in the same colour</p>  <p>corresponding</p>																																
<p><b>Angles in a Triangle:</b> The sum of angles in a triangle is <math>180^\circ</math></p>	<p><b>Angles in a Triangle/Quadrilateral:</b> The sum of angles in a quadrilateral is <math>360^\circ</math>.</p>																																
 $\angle A + \angle B + \angle C = 180^\circ$	 $w + x + y + z = 360^\circ$																																
<p><b>Angles in a Polygon</b></p>																																	
 <p>quadrilateral    pentagon    hexagon    heptagon    octagon</p>																																	
<table border="1"> <thead> <tr> <th>Convex Polygon</th> <th># of Sides</th> <th># of Triangles from 1 Vertex</th> <th>Sum of Interior Angle Measures</th> </tr> </thead> <tbody> <tr> <td>Triangle</td> <td>3</td> <td>1</td> <td><math>1 * 180 = 180</math></td> </tr> <tr> <td>Quadrilateral</td> <td>4</td> <td>2</td> <td><math>2 * 180 = 360</math></td> </tr> <tr> <td>Pentagon</td> <td>5</td> <td>3</td> <td><math>3 * 180 = 540</math></td> </tr> <tr> <td>Hexagon</td> <td>6</td> <td>4</td> <td><math>4 * 180 = 720</math></td> </tr> <tr> <td>Heptagon</td> <td>7</td> <td>5</td> <td><math>5 * 180 = 900</math></td> </tr> <tr> <td>Octagon</td> <td>8</td> <td>6</td> <td><math>6 * 180 = 1080</math></td> </tr> <tr> <td>n-gon</td> <td>n</td> <td>n - 2</td> <td><math>(n - 2) * 180</math></td> </tr> </tbody> </table>		Convex Polygon	# of Sides	# of Triangles from 1 Vertex	Sum of Interior Angle Measures	Triangle	3	1	$1 * 180 = 180$	Quadrilateral	4	2	$2 * 180 = 360$	Pentagon	5	3	$3 * 180 = 540$	Hexagon	6	4	$4 * 180 = 720$	Heptagon	7	5	$5 * 180 = 900$	Octagon	8	6	$6 * 180 = 1080$	n-gon	n	n - 2	$(n - 2) * 180$
Convex Polygon	# of Sides	# of Triangles from 1 Vertex	Sum of Interior Angle Measures																														
Triangle	3	1	$1 * 180 = 180$																														
Quadrilateral	4	2	$2 * 180 = 360$																														
Pentagon	5	3	$3 * 180 = 540$																														
Hexagon	6	4	$4 * 180 = 720$																														
Heptagon	7	5	$5 * 180 = 900$																														
Octagon	8	6	$6 * 180 = 1080$																														
n-gon	n	n - 2	$(n - 2) * 180$																														

# Angle Properties of Circles

<p><b>Angle in a semi-circle is a right angle.</b></p>	<p><b>Angles in the same segment are equal.</b></p>
	
<p><b>Angle at the centre of the circle is twice the angle at the circumference.</b></p>	<p><b>Angles in opposite segments are supplementary/cyclic quadrilaterals.</b></p>
	 <p> <math>a + c = 180^\circ</math>  <math>b + d = 180^\circ</math> </p>
<p><b>Angle between the tangent and radius/diameter of a circle is right angle</b></p>	<p><b>Alternate segment theorem</b></p>
